

Free style in the seed bead embroidering

The first tip: you may stitch anything a needle can pierce - from T-shirts to shoes. During summer I may get really crazy in my stitching ideas, as beads look really gorgeous in the sunshine! I want to make thousands of different things! So, first of all, I have put the beads on all my blouses and jeans jackets that I could only find in my house.

The second tip: If you want to cover some area with beads, you may stitch it in zigzag lines and then make links of beads - in the end you will get a free-style honey cell ornament.

The third tip. If you can't carry out the work neatly enough, pretend that it had been meant to be the way you have done it. I always do and it works just great! When you combine beads of different: pearls or cut glass beads together with transparent crystals and translucent plastic beads – any pattern will have a free formed design that is just cannot be wrong.
